Work Experience

February 2024 – February 2025

Software Developer Contractor | BBD (Barone Budge and Dominick) - South Africa

In my role at BBD, I contributed an integral part in enhancing and sustaining an internal software platform that streamlines HR operations such as employee contract management and performance evaluations. My work involved addressing software bugs, conducting rigorous testing, and contributing to feature development to improve system functionality. I have gained hands-on experience with a modern tech stack, including Angular, TypeScript, JavaScript, HTML Lit, CSS, Redux, Node.js, Express.js, MS SQL Server, and Azure, all while focusing on delivering efficient, scalable, and user-friendly solutions.

April 2022 – January 2023

Full Stack Web Developer | Umuzi.org - South Africa

During my Full Stack Web Developer Learnership, I gained hands-on experience in front-end and back-end development. I built responsive UIs using HTML, CSS, JavaScript, React, and React Native, while managing data with Node.js, SQL, and MongoDB. I became proficient in Git for version control and collaborated using Agile practices like sprints and code reviews. The

learnership also strengthened my troubleshooting and problem-solving skills through real-world projects, equipping me with a strong foundation in full-stack development.
